Lectures

If you are interested in knowing more about how energy works please check out Dr. Kronn's lecture. We have posted a composite of the lectures presented by Dr. Kronn this spring and summer on our website. It presents a clear and easily understood overview of the theoretical foundations for his technology. This presentation called "Energy - the Missing Link to Health" can be found in the *Lecture* section on our website at: www.energytoolsint.com.

Testimonials

The following information describes, in their own words, the experiences of practitioners who use energetics in combination with their standard protocols. They are finding that influencing the energetic system has a significant impact on accelerating the healing and repair process.

Re-attached amputee recovers...

"We had a gentleman who was 32 years old. At work as a millwright he lost his arm from the elbow down. It just got yanked off in a machine. They were able to attach it, but he had a metal plate in his arm because of the post-surgical activity. So, he suffered not only with the surgical phenomenon, but the post-surgical, and then the post-traumatic stress. When doing his blood pressure analysis, we found his blood pressure was 118/70 lying down. When we stood him up and took his blood pressure again, it dropped from 70 to 40. He felt weak and thought he was going to pass out. Of course, he was about ready to. By starting the Subtle Energy protocols--we have been working with him for about four months--we now have this client talking about going back to work. He's actually playing basketball with his sons--he has high school kids--and he's chasing them around, going hiking. So we have seen a profound shift in his energy, and more importantly his blood pressure is stabilized, has become more normal, and it doesn't bottom out when he stands up. Previously, if he stayed in an upright postural position for a half-hour or hour, he'd say he couldn't stand up and needed to lie down. So we are seeing a re-regulation in these individuals in a very profound way." --Dr. Steven Davis ☐

93-year old keeps on going...

"I have a wonderful little geriatric case, a little gal who is 93 years old, and she's been trying to die naturally for the last year and half. Just about the time she pooped out, we just increased her dose a little bit. People have to walk 14 stairs to come and see me... We call that physical therapy ... But, in the process of doing that, this little gal gets to a point where she can't walk up stairs at home, and her daughter will say she wants to come see me, but can't walk up stairs. So I add a couple of drops of each of

the different remedies she's taking, and give her till the next day and see where we're at. The next day, she walked up the stairs to my office and we had a nice little conversation. So, we have this gal who has a son, a gerontologist, who's just been waiting for mom to die, can't believe that mom's still alive given all the physical parameters that continue to show up in lab work and blood pressures. It's just that everybody in the family's been waiting for grandma to die and she won't, because we keep energizing her. It's like that pink rabbit that just keeps on going." --Dr. Steven Davis

Getting straight...

"We had a gal come in who is 22 years old, and for 12 years has never been sober or off drugs--cocaine, heroin, crank--for more than five days in her life. She's been through drug rehab three times. Linda put her on a protocol of these drops along with some other amino acids and the fatty acids. She's now stabilized and has been drug-free for six and a half months. So we were very appreciative of having this tool when this girl came in." --Dr. Dave Carpenter ☐

Treating Chronic Fatigue

Sleep

"In the process of working with the Subtle Energy, I found it to be very effective in helping to re-regulate the sympathetic and parasympathetic rhythms. We had our clients take ten drops a night, an hour before bed, which allowed them to get into a little deeper sleep without modulating or pushing them down. We also found that when we put the *Balance* with the *Stress Relief* (I would just have them combine them into about an ounce of water about an hour, half-hour before bed), two things took place: they got a deeper, more restful sleep without the periodic hour-and-a-half wake up with panic attack; and we found during daytime, when they first woke up they had a sense that the new day was going to be better."

New Fatigue Combo

"We found that chronic fatiguers had thyroid imbalances--their thyroid is down and their adrenal glands have failed. We initially started to use the *Revive* and *Rejuvenation* just based upon gut feeling and muscle testing. But it did not have the benefits that I wanted to see for energetics during the day. Thanks to new work from Constance and Yury, there is a new wonderful combination called *Fatigue 1, 2, 3 and 4*, as

well as *Adapt 1, 2, 3, and 4*. The *Fatigue 1, 2, 3, and 4*, for those of you familiar with muscle-testing, it is an easier way to approach this. The true failed chronic fatiguers--the ones who are laid out in bed and you can't stimulate their energy because they do not have the energy to recover--*Fatigue 4* I'm finding can be the one we start with. We use 10 drops in the morning, 10 drops at noon, and 10 drops just in that mid-afternoon 2-3 PM period during the daytime. Try not to have them miss any of those. Do not have them take them after dinner because they have a tendency to keep the sympathetic system and the adrenal function up. So what we're trying to do is harmonize the daytime energy and also harmonize the nighttime recovery, and up-regulate the parasympathetic system."

Viral Components

"We have found that just by switching to these particular components it helps, and then if they have a viral component underneath that such as the Epstein-Barr, Human Herpes cocktail going on, I will also add the *Acute Immune Thymus*. For those of you that have been around this Chronic Fatigue world you know you can put anybody on Adaptogen, you can put anybody on a mineral

mix, you can put them on any kind of support system of sublingual B-12, the whole variety of things to try to get that energy up. But what happens is they'll do okay for a day or two, but they'll crash again. Or, they do fine for a week or two--you prop them up, and they'll crash again. What we find is--and this is what is very exciting--that they begin in about two to three days sensing that their energies are coming. They are also getting a deeper sleep at night, and their regulatory systems for energy--the cravings for the caffeine and the stimulants, and those things for those who are just trying to get through and are still working--are not having that craving phenomenon happening. What we're finding is a sense of healing deep down inside." --Dr. Steven Davis

Closed-Head Injuries

"The closed-head injury CFIDS people--the people that haven't been right ever since they had the car accident, or they hit their head ice skating--any kind of closed-head injury we use the *Clear Mind* coupled with the *Balance*. If you measure the hypothalamus point above the ear, right and left, with the EAV, or you check them for switching with the AK, the combination of *Clear*

Mind and *Balance* reunites the right and left hemispheres. and puts the energy there. Then once the HPA access gets enough energy and starts to reactivate, it will again respond to normal therapeutics in a predictable way instead being a paradoxical responder." -
-Jeff Marrongelle

Emotional Components

"With the chronic fatiguers, they all have an emotional component, stress, depression and anxiety. What I have found is that by using the *Tranquility* along with the *Stress Relief* really clears an awful lot of this pent-up depression, which is circumstantial. What I have observed over the years of doing this, is that chronic fatiguers are not malingerers. Chronic fatiguers are truly sick people, who were well-motivated, worked, and were highly productive. What they find is that the harder they work at getting well, the worse they are. So, therefore, their circumstantial depression is actually overwhelming them. What's happening is they're losing their houses, they're losing their cars, they're losing their relationships, wives and kids. So what we found recently is that by bringing in the *Stress Relief* and *Tranquility* it really helps dampen that and bring their energies up, and has brought their brain up."--Dr. Steven Davis

Research

We are planning to do a clinical study on stress and depression and have put together a research form for this purpose. We ask for participation from practitioners who are working with patients in these categories. Please contact us if you are interested in taking part in this study.

What's New?

We have posted a "Research Outline for Applications of Vital Force™ Technology" in the *Research* section of our website. We invite you to look at it at www.energytoolsint.com. Please contact us if you are interested in participating in a research project or know of someone else who might be interested.

Currently we have a number of new studies in the start-up phase at several universities and institutions. The details will be posted as they develop.

Energetic Protocols

Cold & Flu Season

"Especially in the last couple of years, we've found that initiating a therapy you have to hit it hard on the front end, and you've got to stay with it for longer than a five, seven or ten day period. A lot of my patients, instead of getting flu shots, we encourage them to start before the cold and flu season to get into a preventive protocol. It always includes the regular *Immune Support* formula with the *GI Aid*.

"In a lot of higher risk patients we start in September and October. I usually test by EAV. There's always a stress component with adults that you don't really have so much with kids. So I look for which of the stress-related, or hormone-related in some

cases, formulas that are more synergistic with adults: *Stress Relief* or *Tranquility*, or *Harmony*, especially with people who have recently had any dental work, or have a history of cavitations, root canals, etc. I'm always looking at *Harmony* as being in combination with the *Acute Immune*--really excellent for our dental conditions. But the adults will usually have an emotional component, too, because they not only get sick, they get stressed out because they're not feeling well, and that component needs to be addressed." --Dr. Jeff Marrongelle

Winter Hydration

"Winter season comes and people dehydrate unbelievably. More so, I believe, in our winter climates, than they do in the summer. They have

indoor air that is usually forced hot air, and you can lose 2-3 quarts of water a night just breathing--exhaling the vapor that comes off the lungs. So the sinus passages tend to dry out. There's a tremendous need for fluid in the winter, and yet we don't have our thirst mechanisms up and running the way they should be. So we feel that another side benefit of dosing with the ionic minerals in water is to increase and promote hydration. Once that's done and the hypothalamus has kicked back in, people now start to feel the need to drink water because they're now getting appropriate responses from the hypothalamus. So those are the highlights of how we dose some of these things through this period of time." --Dr. Jeff Marrongelle

On the Animal Front

We have recently expanded our group of practitioners to include several vets who are testing applications for use of the Vital Force™ formulas in organic dairies. It is our hope that Vital Force™ Formulas can assist organic farmers with effective non-toxic health maintenance protocols to lower the incidence of conditions such as mastitis, scours, shipping fever and a host of other animal husbandry challenges.

New MSM Spray Success

The recently developed MSM spray caters to topical applications for hairy animals where a cream is not practical. This particular formula uses *Stress Relief*, *Acute Immune*, and *Harmony* mixed with a combination of MSM, water and Willard Water.

Veterinarian Dr. Gary Tran of Kentucky: "We

have the spray with the energized MSM that Constance sent me for trial for animals because they have hair, and it's very difficult to use the lotion. Especially with this formula, I use it for skin infections, and they heal so fast you wouldn't believe it. I have a case

of an dog that was dragged behind a car around a neighborhood, and it had severe skin damage all over the body from head to tail. It healed in less than a week! I spent about four hours on the pet in surgery, and I've never seen a healing that happened so quickly. There were no complications, no divisions of suture lines, no infection, no nothing. It healed from the first day on, and I removed the sutures after about one week."

More Protocols

Geriatric Treatment

"By the time somebody presents to you and decides, Well, I better go see the doctor because I haven't been feeling good for a while--it's usually more than a few days down the road. I take these cases the most seriously of all because in kids, they usually have very vital and capable immune systems and can rebound. But a lot of times in our older population they're already debilitated and may have other nutritional needs. They may have dehydration as an issue. We always address those two things right out of the gate. Their vitality is just not what it should be, and so I'm always looking at *Revive* or *Restore* or

Rejuvenation as a first thing to test for, and secondarily look for the immune response. If they are presenting with some symptomatic infective situation, of course, we do regular physical examination and evaluation to see at what level they are. Even if a person is on a course of conventional antibiotic therapy we continue to co-treat people. But we will really push *Revive* or *Restore* hourly again for four to five days, maybe a week, with a very high frequency, low dose stimulation. Just imagine doing a trickle charge. Well, the older the battery, it is less likely to respond to doing a 25 amp or 12 amp jump, or even five amps. Sometimes you just have to trickle it in at two amps for days on

end to revitalize the battery. That's pretty much how the Vital Force products work in people. You look at the amp meter and see where people are, and if they need to be revitalized, then put in low doses--three to five drops hourly for a few days. It's a great way to re-hydrate the person, too, because we find in geriatrics that doing four ounces of water an hour for three to four days while they're awake is much better than having them drink large volumes of water once in a while. It stimulates the hypothalamus, slowly stimulates the lymphatic system, the circulatory system, gastrointestinal system, and it's necessary for mucous production." --Dr. Jeff Marrongelle

Quotable Quotes

Dr. Jeff Marrongelle...

"I've always said that the best thing I've seen with the Vital Force products is that they increase the predictability of response in my patients, because the energy is there to have an appropriate response."

Dr. Steven Davis...

"What we're trying to do is harmonize the daytime energy and also harmonize the nighttime recovery, and up-regulate the parasympathetic system."

Dr. Jeff Marrongelle...

"What we have to keep in mind is that the Vital Force products are really giving us an energy boost. It's a jump start. It's like hooking somebody up to a trickle charger, or even a heavier charger depending on the dosage or frequency. They provide an energetic boost to utilize the biochemical and physiological modalities that we use."

Dr. Steven Davis...

"This new energy protocol is allowing us the opportunity to take those that have somehow defused their battery packs, or somehow have lost their energy because of several metabolism failures, and they are able to regain that. And that is what I think is very, very exciting."
